MARK JOHN REY F. MANA-AY

INFORMATION TECHNOLOGY STUDENT | OJT APPLICANT

Pasig City, Philippines | 0934 827 238 / 0945 886 6105 | jrmanaay999@gmail.com

PROFESSIONAL SUMMARY

Fourth-year Information Technology student at Arellano University – Andres Bonifacio Campus, applying for a 486-hour OJT placement at Teleperformance Silver City. I have built and worked on web and mobile application projects and have practical experience with programming, databases, application testing, and troubleshooting. I am developing QwerNFC, a future technology business focused on software and web applications, database solutions, and NFC products. Three years of customer-facing work have also helped me build communication, teamwork, and time-management skills.

TECHNICAL SKILLS

Programming: Python, JavaScript, Java, PHP, SQL
Web and application development: HTML5, CSS3, JSON, Flask, Capacitor, responsive web development, mobile application development
Databases and backend: SQLite, PostgreSQL, relational database concepts, CRUD operations, database connectivity, API integration
Tools and platforms: Visual Studio Code, Git, GitHub, PowerShell, Cloudflare Workers, Render
AI-assisted development: AI coding assistants, prompt-based workflows, Python automation, model selection and cooldown-aware routing

SELECTED PROJECTS

QwerNFC | *Technology business initiative* | *Application, Web, Database and NFC products*

- Developing QwerNFC as a future technology business that brings together application and web development, database-backed services, and NFC-enabled products.
- Product initiatives include GReview, TimeCapsule, QwerNFC Music, Live Memories, and QyorFoundMe. Live Memories is designed to connect an NFC/QR keychain to a personal digital photo gallery; QyorFoundMe is a QR-based lost-and-found concept with offline-readable contact details and an online recovery page.
- Worked on JavaScript and Capacitor mobile-app workflows, QR scanning and camera integration, PIN-based app security, gallery features, identity and event management, and cloud synchronization.
- Tested camera behavior across portrait and landscape orientations, investigated rotation issues, and used version control while testing changes and supporting staging deployments.

Nexora | *Python / Flask web application*

- Worked on a web application with user authentication, role-based access for administrators, students, and supervisors, and role-specific dashboards.
- Worked with SQLite and PostgreSQL configurations and features for user management and administrative operations.

AI Model Rotation Utility | *Python automation*

- Built a Python utility to select AI coding models by task, track cooldown periods, and switch to an available model when usage limits are reached; created automated tests for its behavior.

PROFESSIONAL EXPERIENCE

Big Brew Milkteashop | *Customer-facing service role* | *3 years*

- Served customers in a busy, fast-paced environment and communicated with them about their orders and requests.
- Worked with teammates to support daily operations while maintaining a helpful and professional approach.
- Built practical skills in customer communication, teamwork, reliability, adaptability, and time management.

EDUCATION

Arellano University – Andres Bonifacio Campus
Bachelor of Science in Information Technology | Fourth-Year Student
Required On-the-Job Training: 486 hours
Additional strengths: Problem-solving, customer service, communication, teamwork, adaptability, and attention to detail.
